REVIEWER INDEX

to Volume 113, May–August, 1986

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 113.

The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant; we must make sure the presentation is accurate, unambiguous and yet readable. For this, we depend heavily on our reviewers, who perform this indispensable service without reward. The quality of the journal can be no better than the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

ADAMS, J.
AHLQUIST, J.
ALBERTSON, D.
ANDERSON, R. P.
ASMUSSEN, M.

BACHMANN, B.
BARNETT, J.
BARRY, E. G.
BECKENBACH, A. T.
BECKINGHAM, K. M.
BELL, A. E.
BENNETZEN, J. L.
BERG, D.

SUBJECT INDEX

to Volume 113, May–August, 1986

Adenylate cyclase, *RAS*, suppressors of, 247
Alcohol dehydrogenase 1
  locus
    evolution of, stratified sampling, 1057
    maize, molecular comparison of two alleles, 449
Allele
  multiple, one-locus fertility model, numerical simulation of, 161
  neutral theory, 1077
  rare, *G6pd*, Drosophila, 679
  variation, molecular level, maize, 449
  visible muscle, *C. elegans*, 63
Allelism, lethal, gene flow in *Drosophila melanogaster*, 73
Allozyme, heterosis, inbreeding and crossbreeding of pine 115
am gene, *N. crassa*, mutagenic specificity of, 45
2-Amino-3-phylbutanoic acid, mutagenesis, *Chlamydomonas moewusii*, 589
Amylase, mRNA, three mouse tissues, 713
Aneuploidy, male sex-ratio, Drosophila, 355
Antibiotics, resistance, plasmid maintenance in populations, 483
APBA: *see* 2-Amino-3-phylbutanoic acid

Bacteriophage lambda
  RecBC recombinase, direction of travel through, 215
  recombination in, IS5 elements, 797
Biogeography, historical, freshwater fish, 939
Birth defects, glucocorticoid-induced, genetics of, mouse, 745
Bronze locus
  Ds effects on recombination, maize, 135
  genetic fine structure, maize, 1021

Caenorhabditis elegans, 63, 621, 821, 853
Catalase, expression, temporal variation for, *Drosophila melanogaster*, 919
Cell division cycle, suppressors of *RAS* mutation, *Saccharomyces cerevisae*, 247
Centromere, precocious separation, novel yeast chromosome, 517
Chi, RecBC recombinase travel, bacteriophage lambda DNA, 215
Chlamydomonas moewusii, 589
Chlamydomonas monoica, 601
Chloroplast, gene inheritance, *Chlamydomonas moewusii*, 589
Clarkia, null mutations, enzyme activity in, 101
Cleft palate, glucocorticoid-induced, genetics of, mouse, 745, 755
Compatibility method, restriction sites, phylogeny and, 187
Computer models
  epistasis and disequilibrium relations, 177
  one-locus, multiple-allele fertility, numerical simulation of, 161

Dictyostelium discoideum, 53
Disequilibrium, epistasis and, relations, two-locus models, 177
DNA
  mitochondrial, evolutionary rates, variability of, 1077
  mitochondrial polymorphism, freshwater fish, 939
  plasmid and chloroplast, maize mitochondria, 469
  polymerase III, subunit interactions of, 499
  reassociation, phylogeny by, 287
  recombination, physical monitoring, yeast, 551
  repair, ethyl methanesulfonate in *E. coli*, 811
  repeated, quantitative variation, maize, 1009
  synthesis, Red-mediated exchange in phage γ, 1
dnaN gene, interactions with *dnaZ* gene, *Salmonella typhimurium*, 499
dnaZ gene, interactions with *dnaN* gene, *Salmonella typhimurium*, 499
Dopachroma conversion factor, genetic controls over, mouse melanocytes, 967
Drosophila
  DNA analysis, *D. mulleri* complex, 287
  euchromatic position effect, enhancement and suppression, 337
Drosophila melanogaster, 73, 265, 305, 321, 337, 367, 641, 665, 679, 695, 869, 897, 919
Drosophila mulleri, 287
Drosophila pseudoobscura, 355
Dysgenesis, hybrid, absence of somatic ef-

fects, *Drosophila melanogaster*, 897

Embryogenesis, Drosophila, 695
Embryonic polarity, Drosophila, 665
Enzyme, synthesis, temporal variation, *Drosophila melanogaster*, 919
Epistasis, disequilibrium and, relations, two-locus models, 177
Escherichia coli, 13, 775, 811
Ethyl methanesulfonate, mutagenic and site specificity of, DNA sequence analysis, *E. coli*, 811
Euchromatic position effect, enhancement and suppression of, Drosophila, 337
Evolution
  rate of
    infectious gene exchange effects, 775
    mitochondrial DNA, 1077

Female-specific lethal lesion, Drosophila, 641
Female-sterile loci, *X*-linked, *Drosophila melanogaster*, 695
Fertility, one-locus, multiple-allele model, numerical simulation of, 161
Frameshift mutagenesis, ICR-170, 45

Galactose, metabolism, *Saccharomyces cerevisae*, 229
Gene
  copy number, amylase, three mouse tissues, 713
  duplication, null mutations encoding phosphoglucose isomerases, Clarkia, 101
  exchange, infectious, rate of evolution and, 775
  expression, temporal variation, *Drosophila melanogaster*, 919
  flow, natural populations of *Drosophila melanogaster*, lethal allelism rates and, 73
  inheritance
    non-Mendelian, 589
    uniparental, Chlamydomonas, 601
  mating-type-limited, *Chlamydomonas monoica*, 601
  modifier, Drosophila, 321
  number, Drosophila, 869
  regulation, galactose/melibiose regulon, 229
  sex determination, Drosophila, 641
  structural protein, *Caenorhabditis elegans*, 621
Genealogy, principal strains of yeast, 35
Genetic control, tyrosinase and dopachrome conversion factor, mouse melanocytes, 967
Genetics
  population, freshwater fish, 939
  quantitative, Drosophila, 321
Genetic structure, fine, *bronze* locus in maize, 1021
Genetic variation, environmental and, tribolium, 391
Genome, nuclear variability in, maize, 1009
Genomic alterations, southern analysis of, APRT, hamster cell mutants, 405
Germ-line restriction, hybrid dysgenesis, Drosophila, 897
Glucocorticoid
  cleft palate induced by, genetics, mouse, 745, 755
  receptor levels, recombinant inbred lines of mice, 735
Glucose 6-phosphate dehydrogenase, analysis of *X* chromosome effects, Drosophila, 321
Glyoxalase-1, variant, associated with *t*-complex in house mice, 91
G6pd, polymorphism, *Drosophila melanogaster*, 679

Heterogeneity, environmental, tribolium, 391
Heterosis, allozyme loci, interbreeding and crossbreeding in pine, 115
Heterozygosity, allozyme loci, interbreeding and crossbreeding in pine, 115
Homothallism, Chlamydomonas, 601
Hormone receptors, levels, recombinant inbred lines of mice, 735

ICR-170, mutagenic specificity of, 45
Inbreeding, pine, heterosis at allozyme loci under, 115
Infectious transfer, bacterial plasmid maintenance, 483
IS5 elements, recombination in, 797

Lipoproteins, allotypes, immunogenic polymorphism of, 985
Lymphoma cells, aphidicolin-resistant mutants, high incidence of spontaneous SCEs, 433

Maize
  alleles of, molecular comparison, 449
  bronze locus in, genetic fine structure, 1021

genome of, quantitative variation in, 1009
mitochondrial plasmid S-1, homology with chloroplast gene *psbA*, 469
Mu mutator, genetic studies of loss, 765
Male sex-ratio phenotype, genetics of, Drosophila, 355
Mandible, shape, glucocorticoid effects, mouse, 755
Maternal effect
Drosophila, 665, 695
nonhomologous *t* recombination, mouse, 723
Meiosis
analysis of mutations, physical monitoring of recombination and, 551
induction of recombination, mutants of *Saccharomyces cerevisiae*, 531
precocious centromere separation, novel yeast chromosome, 517
Mobile element, expanding family of, population genetics, 145
Modifiers, autosomal, of rDNA, 305
Molecular evolution, DNA, 1077
Mosaic analysis, lethal mutations, *Drosophila melanogaster*, 367
Mouse
glucocorticoid-induced cleft palate, genetics of, 745, 755
house, glyoxalase-1 variant, *t*-complex, 91
lymphoma cells, mutants with high spontaneous SCEs, 433
nonhomologous *t* recombination, 723
recombinant inbred line, genetics of glucocorticoid receptor levels, 735
three tissues, amylase gene copy number and mRNA abundance in, 713
tyrosinase and dopachrome activity, genetic controls over, 967
Y chromosomal repetitive sequence, 417
Muscle, *C. elegans* mutation effects, 853
Muscle gene, *sup-10 X*, visible allele of, *C. elegans*, 63
Mutagenesis
chloroplast genes, *Chlamydomonas moewusii*, 589
ethyl methanesulfonate, DNA sequence analysis of, *E. coli*, 811
genomic alterations in, APRT hamster cell mutants, 405
Mutants
aphidicolin-resistant, high incidence of SCEs, 433
dominant, *Caenorhabditis elegans*, 821
hamster cell, southern analysis of genomic alterations in APRT, 406
muscle, *Caenorhabditis elegans*, 853
rad, recombination in, meiosis induction of, 531
streptomycin and erythromycin resistant, *Chlamydomonas moewusii*, 589
Mutation
adult-lethal, Drosophila, 367
data, gene number in Drosophila, 869
EMS-induced, duplicated genes in Clarkia, 101
meiotic-defective in yeast, physical monitoring of recombination and, 551
transformants and, *rosy* locus in *Drosophila melanogaster*, 265
Mutators
bacterial, hyper-recombinating recipient strains in, 13
Mu, loss of, maize, 765

Nearest neighbor effects, ethyl methanesulfonate, DNA sequence analysis of, *E. coli*, 811
Nested subsamples, properties of, divergence of alleles in, 1057
Neurospora crassa, 45, 569
Neutral model, sampling properties of, divergence of alleles, 1057
Nucleotide sequence homology, plasmid, chloroplast, and mitochondrial DNA, maize, 469
Nystatin, resistance, linkage analysis of, *Dictyostelium discoideum*, 53

Phage γ, Red-mediated exchange in, DNA synthesis at site of, 1
6-Phosphogluconate dehydrogenase, analysis of *X* chromosome effects, Drosophila, 321
Phosphoglucose isomerase, duplicated genes encoding, null mutations of, Clarkia, 101
Phylogenetic inference, restriction cleavage sites and, evolutionary change, 187
Pinus attenuata, 115
Plasmids, maintenance in populations, transitory derepression and, 483
Pleiotropy, genetic and environmental variation, experimental test, tribolium, 391
Polymorphism
glucose 6-phosphate and 6-phosphogluconate dehydrogenases, Drosophila, 321
immunogenic, lipoprotein allotypes,

985
structural and poly(A) addition, maize *alcohol dehydrogenase 1*, 449
Population genetics
freshwater fish, 939
mobile element, 145
theoretical, fertility model, numerical simulation of, 161
Population structure, gene flow, *Drosophila melanogaster*, 73
Protein
molecular evolution, variability of, 1077
structural, unusual loci, nematode, 621
variation, gene flow in *Drosophila melanogaster*, 73

RAS, mutation, suppressors of *Saccharomyces cerevisae*, 247
rDNA, magnification, Drosophila, 305
RecBC, recombinase, direction of travel through bacteriophage lambda DNA, 215
Recombination
bacteriophage lambda DNA, direction of travel, 215
chloroplast genes, *Chlamydomonas moewusii*, 589
gene exchange, rate of evolution and, 775
homology requirements, IS*5* elements, 797
hyper-, bacterial junction, 13
intragenic, transposable element of *Ds* effect on, maize, 135
meiosis induction of, mutants of *Saccharomyces cerevisiae*, 531
physical monitoring of, meiosis-defective mutations in yeast, 551
rDNA, wheat, 1037
suppression of, nonhomologous pairing for *t* haplotype, 723
Red system, phage γ, DNA synthesis in, 1
Repetitive sequence, *Y* chromosome, mouse, 417
Resistance, nystatin, mutations in *Dictyostelium discoideum*, 53
Restriction sites, evolutionary change, phylogenetic inference and, 187
R locus, *Ds* effects on recombination, maize, 135
RNA, messenger, abundance, amylase, three mouse tissues, 713
Rosy locus, transformation, *Drosophila melanogaster*, 265

Saccharomyces cerevisiae, 35, 229, 247, 517, 531, 551
Salmonella typhimurium, 499
SCE: *see* Sister chromatid exchange
Sex determination, female-specific lethal lesion, Drosophila, 641
Sex-lethal, positive gene regulation, Drosophila, 641
Sexual reproduction, advantage of, infectious gene exchange, rate of evolution and, 775
Sister chromatid exchange, high spontaneous, mutants with, 433
Slime mold, nystatin resistance loci, *Dictyostelium discoideum*, 53

t complex, house mice, glycoxalase-1 variant, 91
t haplotypes, nonhomologous pairing, mice heterozygous, 723
Temperature-sensitive period, mutations, Drosophila, 367
Transformants
expression variation, *rosy* locus *Drosophila melanogaster*, 265
qa-2$^+$, genetic and molecular analysis, *Neurospora crassa*, 569
Transposable element
Ds effects on recombination, maize, 135
transmission and modification, maize, 765
Tribolium, genetic-environmental variation, 391
Tyrosinase conversion factor, genetic controls over, mouse melanocytes, 967

Wheat, homologous crossing over, sister chromatid exchange and, 1037

Y chromosome, repetitive sequence, isolation and characterization, mouse, 417
Yeast
galactose induction, long-term adaptation, 229
genetic stock center, genealogy of principal strains, 35
meiosis-defective mutations in, physical monitoring of recombination and, 551
novel chromosome, precocious meiotic centromere, 517
